

# FABA Venture Capital Token

FABA is the first venture capital company with positive impact on our lives.

## Our Approach

FABA LTD invests in those projects that passed through professional due diligence process, where it becomes an equity shareholder. Due to our professional approach, financial investment and the time commitment of the mentors and FABA token holders, the valuation of companies raises and the risk is reduced. Our investments are then exited at their peak to return multiples of initial investment to our investors.

## Why FABA

- potential of over 3x return on investment, 11x if unicorn found in 5 - 8 years
- increased liquidity in crypto-token
- the highest quality dealflow
- investing in only top 1 % of companies
- unique hands on approach to portfolio value creation
- diversified portfolio
- strong network of corporate and university partners

## Investment Strategy

- Foodtech, Biotech, AI, Robotics, Environmnet, Education and other sector agnostic opportunities
- 72 Seed, 33 Venture and 5 Private Equity Investments
- FABA holds minority share (10 % to 40 %) on each portfolio company
- 2 - 8 years investment and value creation period per company

## Profit Distribution

- When portfolio company is exited FABA allocates 30 % of the sum that was successfully generated over initial investment for re-investing and 70 % of the sum will be distributed among the FABA token holders on pro rata basis
- We expect potential of return on investment incl. unicorn 1.100 % for 8 years, 138 % p.a., in the realistic scenario excluding the unicorn 282 % for 8 years, 35 % p.a.
